Sample Exercises and Their Solutions

Exercise 1: Creating a Simple Inheritance Hierarchy

Problem:

Create a superclass called `Animal` with a method `makeSound()`. Then, create subclasses `Dog` and `Cat` that override `makeSound()` to provide specific sounds.

Answer Explanation:

This exercise demonstrates inheritance and method overriding. The `Animal` class provides a general structure, and subclasses customize behavior.

```
```java
```

```
public class Animal {
```

```
 public void makeSound() {
```

```
 System.out.println("Some generic animal sound");
```

```
 }
```

```
}
```

```
```
```

```
```java
```

```
public class Dog extends Animal {
```

```
 @Override
```

```
 public void makeSound() {
```

```
 System.out.println("Woof");
```

```
 }
```

```
}
```

```
...
```

```
```java
```

```
public class Cat extends Animal {
```

```
@Override
```

```
public void makeSound() {
```

```
System.out.println("Meow");
```

```
}
```

```
}
```

```
...
```

Usage:

```
```java
```

```
public class TestAnimals {
```

```
public static void main(String[] args) {
```

```
Animal myDog = new Dog();
```

```
Animal myCat = new Cat();
```

```
myDog.makeSound(); // Outputs: Woof
```

```
myCat.makeSound(); // Outputs: Meow
```

```
}
```

```
}
```

```
...
```

This solution highlights core object-oriented principles: inheritance and method overriding.

## Exercise 2: Implementing an Interface

Problem:

Define an interface `Playable` with a method `play()`. Implement this interface in classes `Guitar` and `Piano`, providing specific implementations of `play()`.

Answer Explanation:

Interfaces define a contract that implementing classes must follow, promoting abstraction and flexibility.

```
```java

public interface Playable {

    void play();

}

...

```java

public class Guitar implements Playable {

 @Override

 public void play() {

 System.out.println("Playing the guitar");

 }

}

...

```java
```

```
public class Piano implements Playable {  
  
    @Override  
  
    public void play() {  
  
        System.out.println("Playing the piano");  
  
    }  
  
}
```

Usage:

```
```java  

public class MusicTest {

 public static void main(String[] args) {

 Playable myGuitar = new Guitar();

 Playable myPiano = new Piano();

 myGuitar.play(); // Outputs: Playing the guitar

 myPiano.play(); // Outputs: Playing the piano

 }

}
```

This exercise emphasizes interface implementation and polymorphism.

### **Exercise 3: Abstract Classes and Method Overriding**

Problem:

Create an abstract class `Shape` with an abstract method `calculateArea()`. Implement subclasses `Rectangle` and `Circle` that provide specific implementations.

Answer Explanation:

Abstract classes serve as base classes that cannot be instantiated directly but can contain abstract methods that must be overridden.

```
```java
```

```
public abstract class Shape {
```

```
    public abstract double calculateArea();
```

```
}
```

```
```
```

```
```java
```

```
public class Rectangle extends Shape {
```

```
    private double length, width;
```

```
    public Rectangle(double length, double width) {
```

```
        this.length = length;
```

```
        this.width = width;
```

```
    }
```

```
    @Override
```

```
    public double calculateArea() {
```

```
        return length * width;
```

```
    }
```

```
}
```

```
```
```

```
```java
```

```
public class Circle extends Shape {
```

```
    private double radius;
```

```
    public Circle(double radius) {
```

```
        this.radius = radius;
```

```
    }
```

```
    @Override
```

```
    public double calculateArea() {
```

```
        return Math.PI * radius * radius;
```

```
    }
```

```
}
```

```
```
```

Usage:

```
```java
```

```
public class ShapeTest {
```

```
    public static void main(String[] args) {
```

```
        Shape rect = new Rectangle(5, 10);
```

```
        Shape circ = new Circle(7);
```

```
        System.out.println("Rectangle area: " + rect.calculateArea()); // 50.0
```

```
        System.out.println("Circle area: " + circ.calculateArea()); // Approx. 153.94
```

```
}
```

```
}
```

```
...
```

This solution demonstrates abstraction and how subclasses implement abstract methods.
